

About Me

I love making games, its what I have always wanted to do even as a kid. I am proficient in many things and I learn quick.

Education

I went to school at Saint Paul College, and got my associates degree in Computer Programming. I graduated this May.

Info

Date of Birth: 11/22/2005

My Website: fatalmaximus.com

Max Miller

Computer Programmer / General Artist

Experience

While I don't have any formal work in the field, I have been making games for the past 7 years. Doing so has taught me so much it is invaluable. It has given me a wide skill set, I am decent at art, UI, game design, and programming. I may not be the best at any one of these things, but I am very versatile. I have an eye for when something is good.

Godot

This is the main game engine I use, I am extremely proficient with it as I have been using it for 5-6 years now. I have some experience with Unity and Unreal, but I just don't enjoy it as much.

Kenji: Unleash Guts

This is a project I released on itch.io, it isn't fully representative of my best work but it is completed. I did all assets, coding, etc, the only exception being the battle music.

Iron Control

This is the game that I have been working on for the past 2 years while I was in college. It's kinda like a vertical slice at this point. This is most representative of my skill so far.

You can view part of the project on my website. Not much of the game is actually showcased anywhere yet so you can contact me to see more.

Hobbies

I like to make clothes in my free time. I customize pants, t-shirts, whatever to make the stuff I think looks cool. Also just general alterations for friends and family. Hemming pants and stuff like that.

I like movies quite a bit too.
